

Hope Chapel Technical Specification

The natural acoustics at Hope Chapel make it a unique venue in Hebden Bridge. When it was built in 1857, a 1000-strong congregation could hear a minister preach from the pulpit using just their voice. And today, choirs often choose to use the building without a PA system. Years of experience has allowed us to test and install equipment that makes the most of these natural qualities and creates a great experience for both audience and performer. The church has therefore invested in systems providing high quality sound and, with a trustee who is also an experienced sound engineer, we can offer expert advice, even providing additional equipment, if required.

Audio Equipment

x2 LD Systems MAUI44 PA system, 1600W active column array/subwoofer (on stage)

x4 LD Systems G3 Stinger active speakers, 800W (under gallery)

x2 Behringer 1200W full range active speakers (gallery)
